“Spectral Signatures of Short Range Order in Condensed Water Phases“

The transformations between water phases have distinctive signatures originating from changes of the short-range order in the underlying hydrogen bond network. In this talk I will review theory and computations that reveal how structural modifications manifest in experimental observations from a variety of techniques, ranging from infrared to x-ray absorption spectroscopy and deep inelastic neutron scattering.

Ort: Max-Born-Saal, MBI, Max-Born-Str. 2a

Interessenten und Gäste sind herzlich eingeladen.

Prof. Dr. I. V. Hertel
